

ELYX ON THE ROADS – TURKEY ACTIVITY

Objectives and Results Report

Objectives

The main aim of the activities carried out in Türkiye was to increase students' awareness of the project topics, develop their environmental awareness and understanding of sustainable living, and provide opportunities to experience different learning methods.

Within this framework, the main objectives were:

- To improve students' digital skills and enable them to express what they have learned through digital stories,
- To raise awareness of environmental protection, recycling and sustainability,
- To encourage students to develop environmentally friendly behaviours in their daily lives,
- To provide students with opportunities to learn from experts and gain real-life experiences,
- To support cultural and social learning,
- To develop students' communication, collaboration, creativity and problem-solving skills,
- To strengthen the exchange of experiences and good practices among project partners.

Activities and Results

During the Türkiye mobility, **digital stories prepared by the students were presented in classrooms**. This gave students the opportunity to share their digital products and express their ideas to their classmates. These activities contributed to the development of students' creativity, communication, presentation and digital skills.

The students visited a **recycling and waste management centre**, where they observed the processes of collecting, sorting and recycling waste. This visit helped students understand more concretely the importance of recycling for everyday life and environmental protection.

As part of the project activities, **two experts from the Ministry of Environment, Urbanization and Climate Change** provided training sessions for the students. Through their presentations and informative sessions, students gained first-hand knowledge about environmental protection, sustainability, recycling and climate-related issues.

At the end of the activities, **participation certificates were presented to the students** to recognise their active involvement and contributions throughout the project.

Overall Evaluation

As a result of the Türkiye activities, students' awareness of environmental protection and sustainability increased, while their ability to express themselves through digital tools was strengthened. Their learning was further supported through real-life experiences, and the activities contributed to the development of their communication, collaboration, creativity and social skills.

The Türkiye mobility helped transform the objectives of the project into meaningful and practical learning experiences. It also provided students with opportunities to introduce their own culture and share knowledge and experiences with project partners from other European countries.

The **digital stories, photographs, videos, certificates and other project outputs** produced during the activities contributed to making the project results visible and documenting the achievements of the Türkiye team.
